End-to-End Fact-Checking

Platform Development for 5 Global
Fact-Checking Organizations Working
on the WhatsApp Business API

The Task

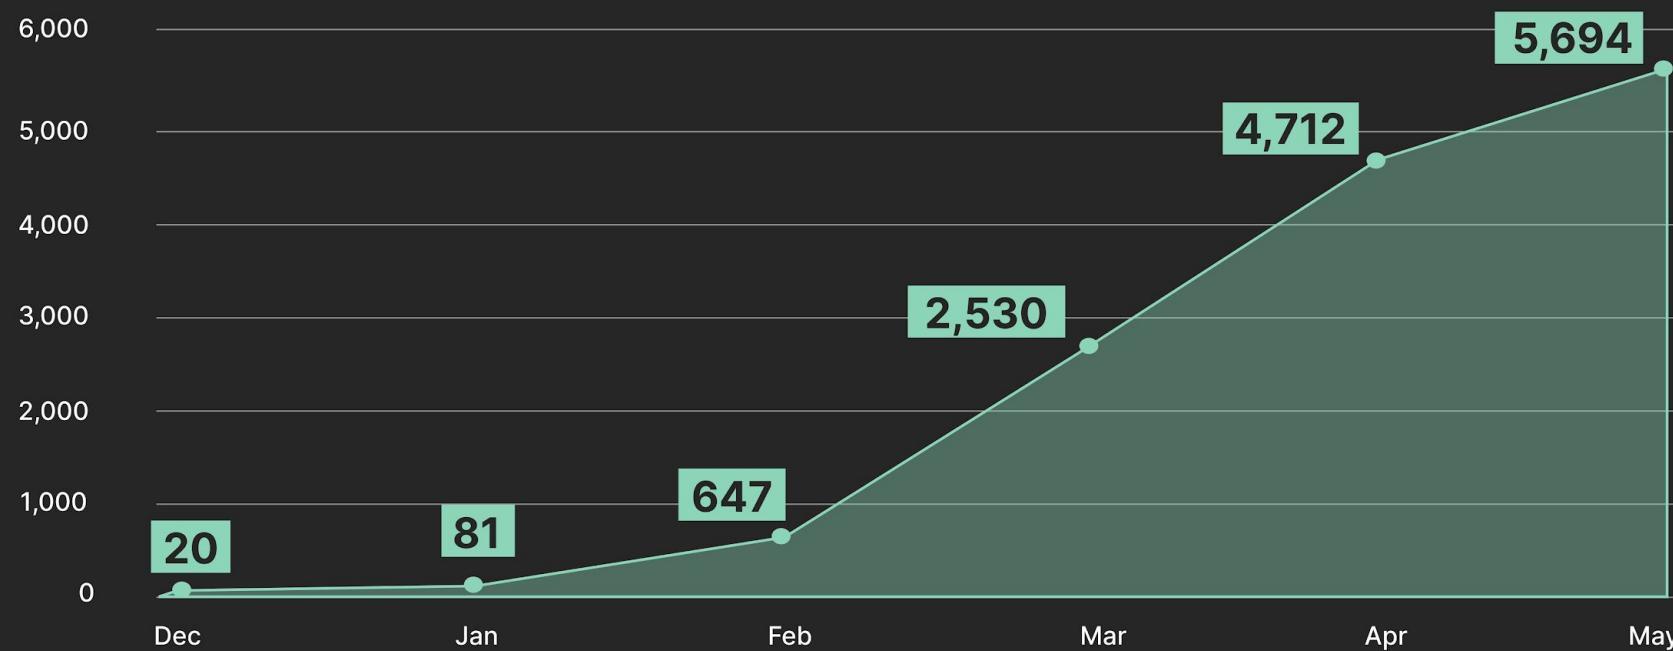

Scale up Check, Meedan's verification and fact-checking platform, to serve as a workflow management and content toolkit for 5 global newsrooms running fact-checking tiplines on the WhatsApp Business API.

From October 2019 through a global pandemic, Meedan has been pushing code, running field studies and testing workflows in concert with AFP (India and Brazil), Africa Check, BOOM and India Today.

Nearly 5,700 fact-checks later, here's what we learned.

Nearly 5,700 fact-checks in 5 months across India, Brazil, South Africa, Kenya and Nigeria

Cumulative number of unique fact-checks

Executive summary

Over 5 months, the Meedan team, working with WhatsApp, Facebook, AFP (India and Brazil), Africa Check, BOOM and India Today learned key insights in how to run effective fact-checking tiplines on WhatsApp while respecting end-to-end encryption.

1. Bots are the new audience engagement paradigm.

A WhatsApp bot can serve three purposes: (1) help audiences understand how to interact with the fact-checking team and see commonly-requested content, (2) serve as a bridge between a human editor and someone submitting content to a tipline and (3) cut down on unactionable content.

2. Machines in the loop augment quality

human efforts. Already designed for human work, Check now automates everything from content matching to intake, helping fact-checkers do their jobs more efficiently and therefore more effectively.

3. Follow the news cycle.

Newsrooms learned that a topic-oriented approach to tipline promotion following the news cycle yields stronger audience engagement and submissions. After the outbreak of COVID-19, we saw an uptick in the percentage of quality, actionable content, in turn generating better fact-checks.

4. Fact-checkers need no-nonsense, no-code

interfaces. Over the course of field studies and through weekly working calls, we steadily adapted our toolkit to help fact-checkers focus on the fact-checking rather than technical tasks. This enabled teams to customize their workflows.

Balkrishna

Fact-checking Editor
India Today

We used to get inundated by the thousands of messages that people would send us on WhatsApp.

Check has not only made it possible for us to sift through the fact check requests quickly, it also helped deliver most of our readers with fast and personalized responses.

This helps us build a direct bond of trust with our audience.

86,974 messages received and triaged since January by 2 full-time fact checkers

Meedan = Journalism + Software

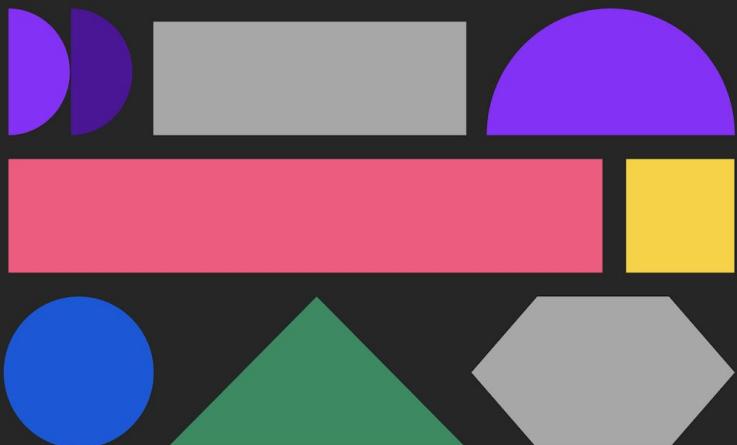

Founded in 2006, Meedan has been working at the intersection of open source technology, digital journalism, and social change to tell stories and improve societies with extraordinary global partners.

Check, our flagship collaborative verification and fact-checking tool, has powered three of the last four years' Online Journalism Awards winners for collaborative journalism. Our workflows and tools have powered Electionland, Verificado, and Checkpoint, among others.

“

Govindraj Ethiraj

Founding Editor
BOOM

The Check tool has helped increase our direct engagement with audiences and shown the path for substantial scale-up and impact in our fact-checking endeavours.

13,236 unique WhatsApp users interacted with the tipline bot

The Check Platform

Check is a web application for journalists to verify and annotate online information, creating datasets to structure open-source investigations.

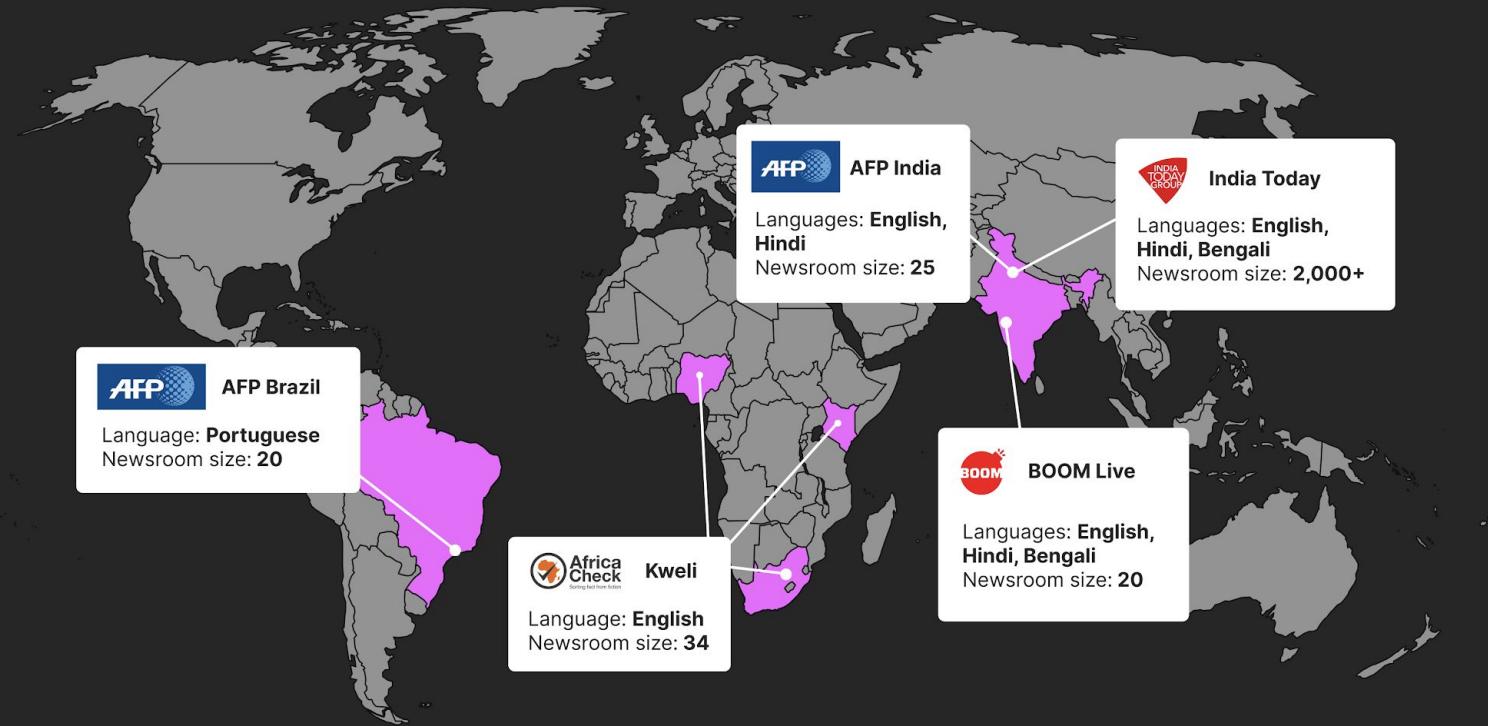

During this pilot, Meedan developed and designed key features to support scaled-up work on tiplines running on the WhatsApp Business API.

Check Components

Multilingual bot	Workflow automation	Similarity analysis	Response at scale
Customizable bot conversations and menus in multiple languages	Triage system to categorize, review and prioritize claims and responses	Algorithms detect patterns in content for variations of the same claims and present trends	Publishing system integrated to messaging platforms in order to circulate fact-checks among end-users

5 countries and 4 languages

Pilot partners represent a range of newsroom and audience sizes and target audiences, spread across multiple languages and continents.

“ ”

Kate Wilkinson
Deputy Chief Editor
Africa Check

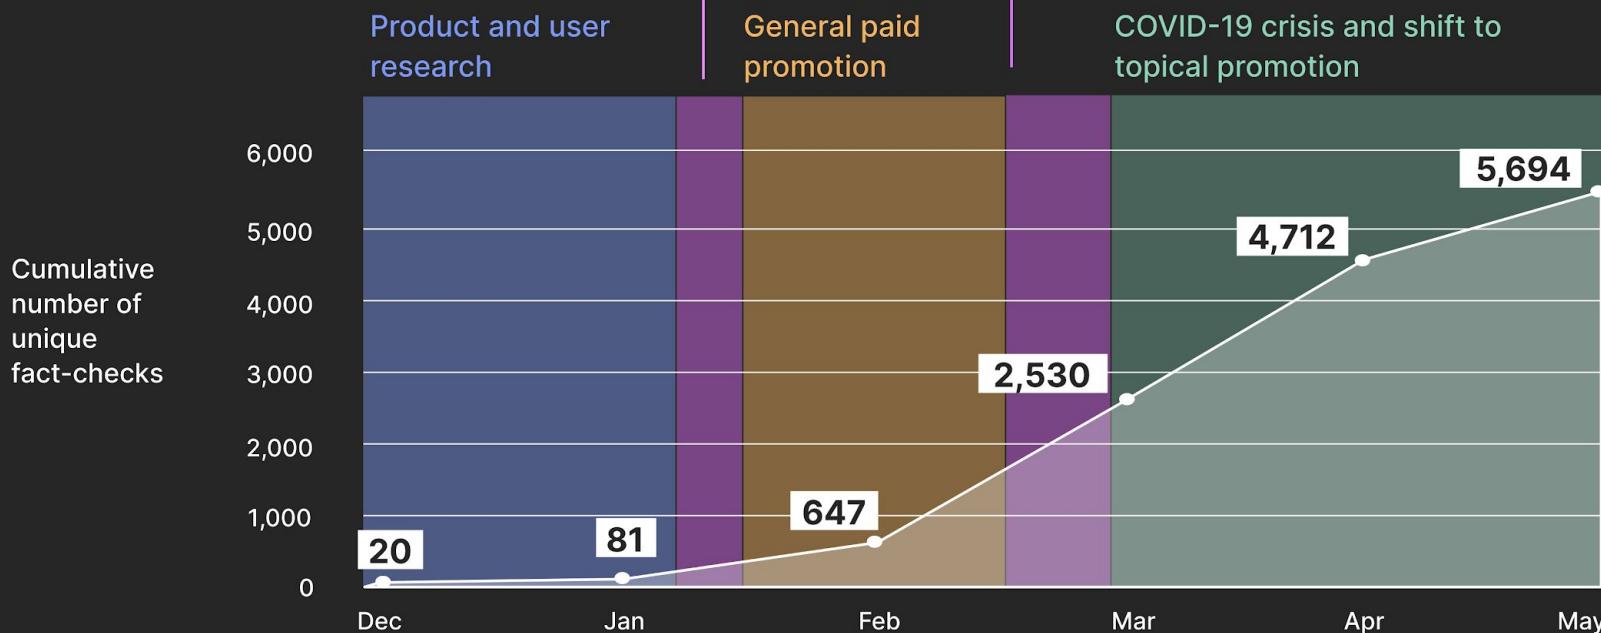

Africa Check operates a tipline across three countries. The Check workflow allows fact-checkers across all our teams to collaborate and follow the same methodology.

Three phases of impact

Over three major phases, we enabled new workflows through product development and editorial strategy to increase both efficiency and impact. Over the pilot, we shipped 214,455 lines of code.

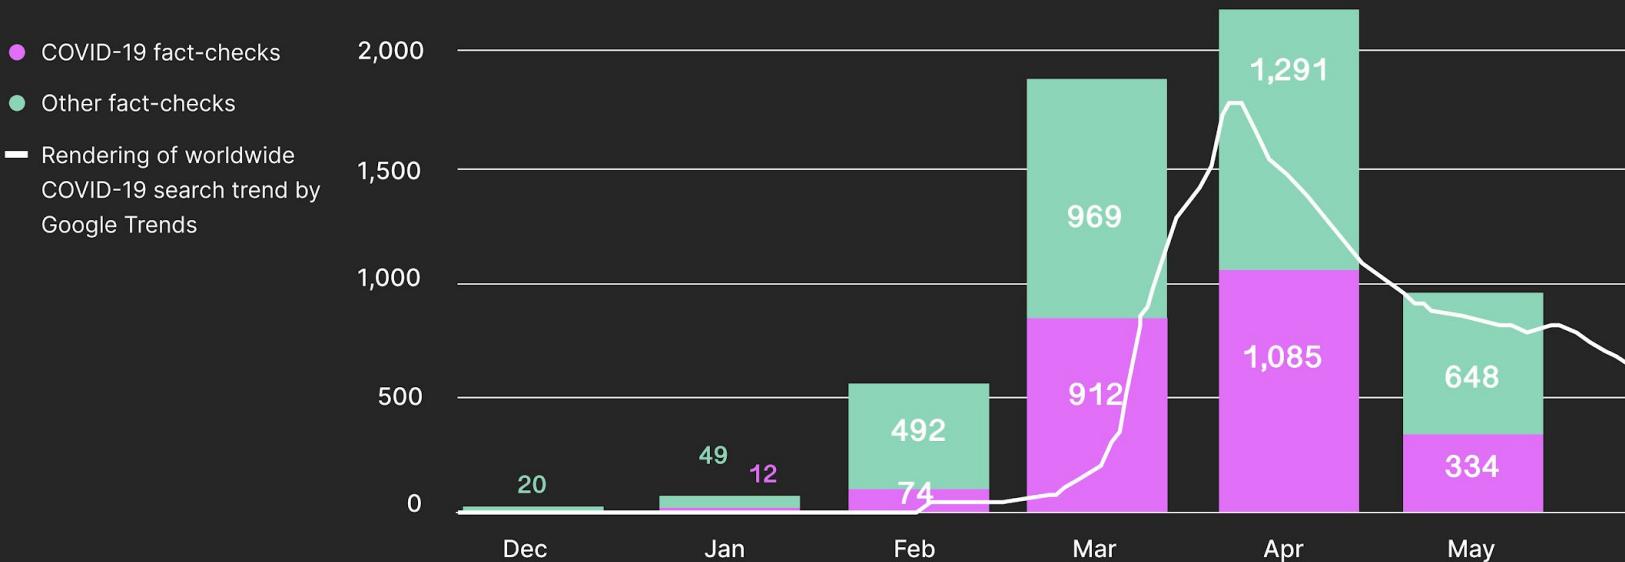

Major product releases and editorial support

COVID-19 crisis and shift to topical promotion

COVID-19: Follow the news cycle

Fact-checks have tended to follow the news cycle, as evidenced by COVID-19 topical submissions. While the percentage of disease-related fact-checks grew, the information crisis also gave more exposure to the tiplines, and many more queries were sent on other topics.

Fast forwarding claims to newsrooms

With enough volume of inbound queries coming through the pipelines, journalists have first spotted trending pieces of misinformation on Check – leading to more investigation, followed by publishing articles on their main websites.

Uzair Rizvi

Fact-checker
AFP India

In the Indian context, we spot misinformation first on WhatsApp. With Check, we were able to immediately send users a report, while also writing longer blog posts on that claim that will be read across different platforms."

Check

COVID-19 Topic Highlights

Some of the top-requested fact-checks ranged from conspiracy theories about the origins of the virus, types of cures, and restrictions on movement.

Government

April 3 No, WHO did not release a COVID-19 lockdown protocol

April 4 The Indian government did not ban reporting on COVID-19

Cures

March 23 No, tea is not a cure for COVID-19

March 23 WHO report does not say Coronavirus stays in cabbage

Conspiracy Theories

March 14 The world isn't coming to an end on April 29

March 2 Chinese state conspiracy theory on the origin of COVID-19

“ ”

Jency Jacob

Editor
BOOM

We've been running a tipline for two years, and this is the tool we have been waiting for.

One that can make the newsroom process of finding misinformation more efficient and automate the responses.

628 fact-check reports automatically matched and sent in response to duplicate user queries

Insight: Machines in the loop augment human fact-checking efforts.

We had a difficult task: empowering fact-checkers, who have the best instincts, know-how and training to deal with complex topics, to work at the scale of WhatsApp. The Meedan development team worked on a machine-in-the-loop system that automated key repetitive tasks, saving people time and energy for higher-order work and research.

In our research, we found that the most time-consuming task for journalists is to parse through large volumes of inbound queries to find the one that need prioritization. Text and image clustering in particular proved essential to triaging content by demand, helping teams prioritize items for response.

At the same time, we've built our database to integrate inbound content from the tiplines with newsrooms' existing databases of fact-checks, thus augmenting previous work they've done.

“

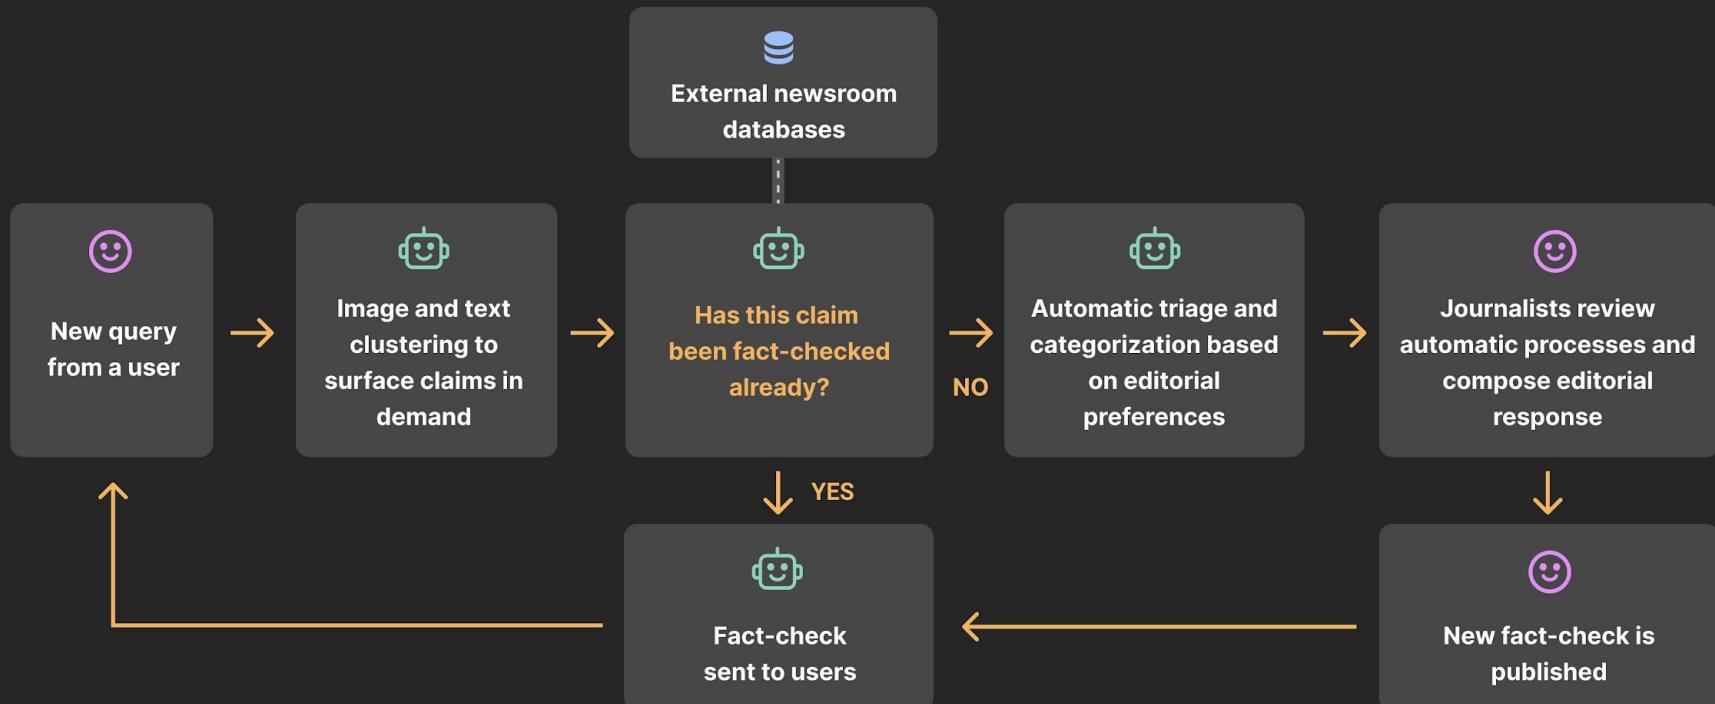

Glad to inform we have addressed 500 verification reports using Check. Big milestone for us!

Anmol Alphonso
Fact-checker, BOOM

C Feature: Hybrid human and machine system

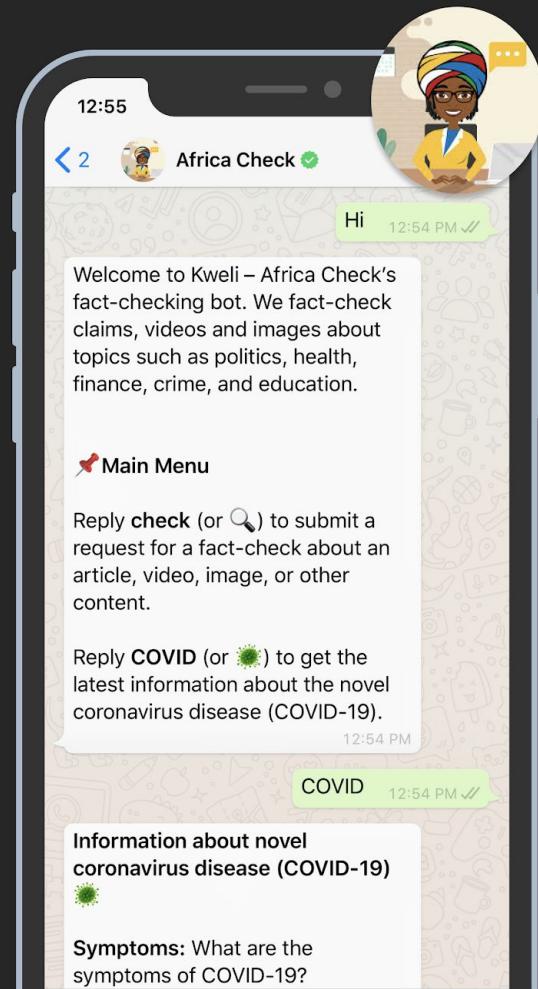

Bots and algorithms take care of the most repetitive and generic tasks, helping journalists focus on high-level editorial tasks.

Insight: The bot editor is the new audience engagement editor.

In a mobile-first world, bot editors are newsrooms' front lines. Especially in low-bandwidth settings, WhatsApp is a key vector for building trust with audiences. Tiplines enable newsrooms to understand the evolution of demand directly from their communities and detect emerging topics and concerns even before they hit social media networks.

News cycles are fast – this is nothing new. What's new is that we've tailored our bots and bot editing interfaces to allow newsrooms to present newsworthy content at users' requests. Bots need to be customized with local content in local languages in order to engage and serve audiences with content that matters to them. Tiplines are more than an opportunity to collect tips: they're an opportunity to build community.

Feature: Deploy multilingual bots in minutes.

Recognizing the possibilities of automating responses to commonly-requested content, we developed both a bot and a bot interface, allowing for quick testing, customization and deployment of content across multiple languages.

EDIT **SET LIVE**

Insight: Newsrooms need a plug-and-play, customizable workflow suite.

Journalists are working at all hours of the day in rapid cycles. The last thing they need is a tool that requires extensive technical skill or consultations with an engineering team. The Meedan team prioritized developing no-nonsense, no-code interfaces that enable journalists to organize, analyze and prioritize their work without technical support.

Each newsroom needs to tailor the logic of their workflows based on their own editorial decisions and priorities, languages, audience demands and the needs of the news cycle. After hours in on-site research in India, Brazil and South Africa followed by weekly calls and near-daily chats, we developed workflows that have enough structure to work out of the box and enough flexibility to enable journalists to customize their workflow accordingly.

“

Check really improved the way we communicate with our readers on WhatsApp.

Now, we can be sure anyone who reaches out through the app will have an immediate and consistent reply, while having time to dedicate ourselves to other parts of the verification process.”

Maria Clara Pestre
Fact-checker, AFP Checamos

Feature: Customize editorial workflows

Each fact-checking team customized every step of their workflow, building from a base set of features that they could easily tailor to their unique contexts.

Claim collection

Triage and Prioritization

The web-based interface displays a list of claims under the heading "D - Coronavirus". One prominent claim is: "China seek for court's approval to kill the over 20,000 coronavirus patients to avoid further spread of the virus - China Xinhua News". Other claims include: "Corona virus, very new deadly form of virus, china is suffering, may come to India immediately, avoid", "Most Urgent: Very serious, important information", "Meantwhile over 25,000 killed they have started shooting down all the people with the virus in China... this is so sad", and "China Daily on Facebook". The interface includes filters like "REQUESTS", "SOCIAL SHARES", "RELATED", "TIME", "STATUS", "FIRST SEEN", and "LAST BEEN".

Contextualization and Research

The web-based interface shows a detailed view of a claim about China seeking court approval to kill over 20,000 coronavirus patients. It includes a thumbnail image of medical staff in protective gear, a reverse search link, and a language selection dropdown. Below the main claim, there are related items such as "Meanwhile over 25,000 killed they have started shooting down all the people with the virus in China... this is so sad" and "China seek for court's approval to kill the over 20,000 coronavirus patients". The interface also includes sections for REQUESTS, TASKS, ANALYSIS, NOTES, and ACTIVITY.

Editorial Response

The web-based interface shows the process of creating an editorial response. A modal window titled "SELECT THE CONTENT TO SEND IN YOUR REPORT" is open, showing options like "Introduction", "Video card", and "Text message". The "Text message" option is selected. The message content is: "Image of Covid-19 testing kit passed off as vaccine on social media FALSE The photo being shared is not a vaccine to cure Covid-19, but a testing kit developed by South Korea. http://Indiatoday.in/fact-check". Below the message, there is a note: "If some social media users are to be believed, American scientists have already developed a cure for Covid-19. India Today All Fake News War Room (ATWN) has found that the claim is misleading and the photo being shared is not a vaccine to cure Covid-19, but a testing kit developed by South Korea." There is also a "Full article" section with a link: "https://www.indiatoday.in/fact-check/story/covid-19-testing-kit-fact-check-concerning-169875".

Distribution

http://www.indiatoday.in/fact-check/story/covid-19-testing-kit-fact-check-concerning-169875

Annotation

The web-based interface shows annotations for the same claim about China seeking court approval to kill over 20,000 coronavirus patients. Annotations include: "Is this true? Please fact check this.", "This is not a genuine news report. While the ATWN website does not carry any disclaimers labeling content as fiction, we found a number of net fagoo concerning the legitimacy of this outlet's report", "Where was this story published?", and "When was this story published?". There is also a comment section at the bottom: "Add a comment..."

Feature: Publish fact-checks at WhatsApp speed

Teams customize the visual appearance and content of their fact-checks before sending them back to users. This allows these items to be readily shared and forwarded with URLs back to the newsrooms' web sites.

The diagram illustrates the process of publishing a fact-check from a newsroom's perspective to a user via WhatsApp.

*Breaking News from CNN 😊

Dr. Li Wenliang, China's hero doctor who was punished for telling the truth about Corona Virus and later died due to the same disease, had documented casefiles for research purposes and had in the casefiles proposed a cure that would significantly decrease the impact of the COVID - 19 Virus on the human body. The chemical **Methylxanthine**, **Theobromine** and **Theophylline** stimulate compounds that can ward off these virus in a human with atleast an average immune system. Whats more shocking is that these complex words that were so difficult for people in China to understand is actually called **Tea** in India, YES, our regular Tea has all these chemicals already in it. The main Methylxanthine in tea is the stimulant caffeine. Other Methylxanthines found in tea are two chemically similar compounds, Theobromine and Theophylline. The tea plant creates these chemicals as a way to ward off insects and other animals. Who would have known that all the solution to these virus would be a simple cup of TEA. and that is the reason so many patients in China are being cured. The hospital staff in china has started serving tea to the patients 3 times a day. And the effect is finally in **Wuhan** "The centre of this Pandemic" has been contained and community transmission has almost stopped.

Please Share this message to your friends and family to make them aware about this blessing in the form of TEA in your kitchen.

About Meedan

Meedan is a global technology not-for-profit that builds software and programmatic initiatives to strengthen journalism, digital literacy, and accessibility of information online and off. We develop open-source tools for creating and sharing context on digital media through annotation, verification, archival, and translation.

We work with technologists, newsrooms, fact-checkers, public health professionals, NGOs and academic institutions on award-winning projects from election monitoring to pandemic response to human rights documentation. This work supports our vision of a more equitable internet.

Please visit meedan.com for the latest information about Meedan and its initiatives.
